Subject: OBJECTION - Newcastle Road Mini Mart - 138 Newcastle Road

Follow Up Flag: Follow up
Flag Status: Flagged

Objection from Cllr Kelly Chequer – cabinet member for Healthy City and ward member for Southwick in relation to the licensing application for 138 Newcastle Road, Sunderland, SR5 1NA

It must be noted for the purpose of this objection that the location of 138 Newcastle Road, while officially in Fulwell ward, is on the boundary of Southwick ward and the houses directly opposite this location on the other side of the road are actually Southwick ward.

I have been contacted by in excess of 30 residents from Newcastle Road and the streets surrounding including Grange Park Avenue, East Grange, West Grange, Grange View, Netherburn Road, Nawton Avenue, Warmouth Drive and Thompson Road. All of these residents are living within a few hundred meters of this location but are residents of Southwick Ward. It is important to me that Southwick Residents have their views heard on this proposal and I have encouraged people to submit their views independently.

You will also be aware that a petition has been submitted by Robert Woodley on behalf of and with signatories from 71 residents of these streets, objecting to this proposal on the grounds of unsocial behaviour, excessive noise and litter. I will also be organising for this petition to be submitted to the next full meeting of Sunderland City Council on the 15th November 2023.

Most residents are not objecting to the property opening, and none of them wish to have a shop sitting empty. All of the people that have contacted me are concerned simply at the proposed operating hours which include selling alcohol from 7am to 3am and the impact this will have on the local area and the quality of life for local residents.

My request as ward councillor on behalf of residents and as the cabinet member for healthy city which includes protecting residents of Sunderland from alcohol harms, is that this application is considered in line with the appropriateness of these extreme opening hours and the sale of alcohol, in a quiet residential area.

My view is that this application does not consider the residential nature of the area at all, and I support the residents in their concerns regarding the sale of alcohol until 3am and the concerns regarding crime and antisocial behaviour which may accompany this. This has been the case when this premises has previously sold alcohol and residents are concerned at the potential for this to return to what is usually an area of low crime and disorder.

As you may be aware Sunderland has significantly worse outcomes in relation to alcohol harms than the England averages, and Southwick ward has worse outcomes specifically.

Please find information below from public health to support my objection as the cabinet member for healthy city:

Data from the Public Health Profiles and Local Alcohol Profile for England demonstrates that in Sunderland there has been a rise in admissions for alcohol specific conditions in 2014/15 Sunderland had a rate of 752 per 100,000 and 2021/22 shows a rate of 1,218 per 100,000, with Sunderland being the second highest in the North-East (991) and significantly higher than the England average of (626).

Our data also demonstrates:

- Admission episodes for alcoholic liver disease (Broad) in Sunderland in 2021/22 was 310.1 per 100,000. This is above the North East rate (238.5) and significantly higher than the England rate (154.4). Notably, Sunderland had the highest admission episodes for alcoholic liver disease in females in England at 239.3 per 100,000, with the England value at 99.6.
- **Alcohol Admissions for under 18's are also a concern with Sunderland having a rate of 76 per 100,000 compared to the England average of 29.3 per 100,000, this is the third highest rate in the North East**
- Alcohol-related mortality in Sunderland for 2021 was 64.4 per 100,000. Sunderland had the highest alcohol-related mortality rates in the North-East (50.4) and was significantly above the England average (38.5). Sunderland had the second highest alcohol-related mortality rates for females in England at 36.6 per 100,000, with the England value at 21.3.
- Mortality from chronic liver disease was 22.4 per 100,000 in 2017-2019 (3 year range). The rate for 2021 (1 year range) was 33.7 per 100,000 with Sunderland having the highest mortality rate from chronic liver disease in the North-East (21.6). This is comparatively higher than the second highest in the North East (Durham at 25.4) and significantly higher than England (14.5).

The data above reflects the level of chronic heavy drinking in the population and is most likely to be found in higher risk drinkers and dependent drinkers. Our data also shows that 26.3% of adults binge drink and at ward level Fulwell is has one of the highest rates of binge drinking.

Years of life lost indicate the contribution of alcohol misuse to premature death. Early death from chronic conditions is disproportionately prevalent in lower socio-economic groups and is likely to place demand on health and social care services prior to death. The death of people of working age will additionally impact on productivity.

Potential years of life lost due to alcohol-related conditions for Sunderland in 2020 is shown below

Potential years of life lost due to alcohol-related conditions	DSR per 100,000
Female	677
Male	1,911

This again is higher than the England average of 500 per 100,000 for females and 1,116 for males.

Our Young People's commissioned drug and alcohol service's data also shows that alcohol is the second highest drug for young people accessing specialist substance misuse and alcohol support.

Based on the evidence above it is my position that granting this license to sell alcohol from 7 am until 3 am would undermine the licensing objective of the protection of children from harm.

Best Wishes

Kelly Chequer

Councillor for Southwick Ward

Cabinet Portfolio Holder for Healthy City

Chair - Sunderland Health and Wellbeing Board

Chair – NENC Integrated Care Partnership (Central Area)
